SUBJECT: Redoubt Lake Fertilization--
Management Considerations

Rupe Andrews, Director
Division of Sport Fish

from: Bob Wilbur
Aquaculture Harvest Coordinator
Division of Commercial Fisheries

113-41-43

The management review (attached) of Redoubt Lake was generally favorable, and NSRAA should be informed that the Department would not expect any major management obstacles should the Redoubt sockeye population be enhanced through lake fertilization.

One possible terminal harvest area problem is that Dolly Varden could be taken by seiners. However, it is believed that markers could be set which would remove seining from the major Dolly concentrations and timing of terminal area sockeye harvests may well follow the time when Dollies would be present in concentrated numbers.
